AGS-X Series

PRACTICAL TESTING SOLUTIONS

10 kN 20 kN 50 kN
The Shimadzu Autograph AGS-X series provides superior performance and practical testing solutions for a wide array of applications. Offering high-level control and intuitive operation, the AGS-X series sets a new standard for strength evaluations while providing the utmost in safety considerations in a modern, stylish design.

The AGS-X comes standard with industry-leading TRAPEZIUM X data processing software. Offering comprehensive functions, TRAPEZIUM X offers an unparalleled level of operation. TRAPEZIUM LITE X, Shimadzu’s entry-level data processing software, provides enhanced productivity and efficiency for quality control operations.
Convincing Cost Performance

New AGS-X Provides Practical, Affordable Testing Solutions

Easy Control of Stress and Strain

Offers real-time auto tuning of control parameters, based on measured test force and strain data. Safely make comparisons to unknown sample data without the need for preliminary tests. In addition, the AUTOTUNING FUNCTION easily performs strain control, an ISO 6892-2009 requirement.

<table>

| PLASTICS & RESIN | Measuring the modulus of elasticity in the ultra-small strain domains proscribed by ISO and JIS standards has become a necessity. |
| ISO 527 | ISO 178 | JIS K7171 |

| CERAMICS | Many samples are damaged by microscopic displacements, so accurate control is needed, right from the start of testing. |

Achieve an Accurate S-S Curve with High-Precision Load Cells

The wide, guaranteed load cell precision range of 1/500 to 1/1 improves testing efficiency and ensures that virtually all of your testing can be performed without switching the load cell or jig. Furthermore, high-speed sampling of 1msec ensures no missed strength changes.

Improved Safety

SAFETY FUNCTION / ONE-TOUCH STROKE LIMIT
The safety function stops the testing machine if force changes exceed a certain level during specimen setting or return. In addition, setting stroke limiters is easy with one touch of the switch.

SAFETY COVER
Controls scattering of the test specimen during testing. The interlock improves safety: operators can open and close it easily with the slide mechanism.

DUAL EMERGENCY-STOP SWITCHES
Features emergency-stop switches on both sides (20 kN–300 kN frame).
Smarter Work Space

New and enhanced functions support easier, more efficient testing
① Safety Guard to Protect Against Flying Debris

A vertically sliding safety guard is available. Opens easily with one hand. When the safety guard is open, an interlock function disables testing and return movement.

② One-Touch Stroke Limiters

Pinch and slide; release to lock. One-touch stroke limiters permit simple one-touch adjustment and firm locking of the crosshead stroke limit positions.

③ Load Cell

For the range of 1/500 to 1/1 of the load cell rating, a single load cell that guarantees test force accuracy to ±0.5% of the indicated value (for high-precision type) covers an extensive testing range. The load cell rated value is stored in the calibration cable and automatically recognized when the cable is connected.

④ Crosshead

Achieves a 1,600 mm/min testing speed and a 2,200 mm/min return speed (20 kN frame), significantly reducing the time required to conduct repetitive testing.

⑤ Common Joint for Both Tensile and Compression Tests (20–300 kN frame)

Adopts a single joint for both tension and compression tests. This makes it easier to exchange jigs. In addition, the joint is set with a nut placed in the upper part of the loading cell, which allows for safe detachment of the joint on the table.

⑥ Built-in Main Operation Panel (for 10 kN frame)

Call up test methods from TRAPEZIUM LITE X to conduct testing. Naturally, AGS-X can be used as a standalone tester to test specimens using methods created with the tester itself.

⑦ Main Operation Panel

The main operation panel enables the development and storing of test conditions, allowing testing without having to connect to a PC. Perform various operations with the jog wheel, such as opening and shutting the button for automatic grips or the automatic extensometer. The main operational panel is movable, allowing convenient adjustment of the angle.

- The controller is needed separately for the automatic opening and shutting of jigs.

⑧ Emergency Stop Button

Reliably cuts off power to the servo amplifier, instantaneously stopping crosshead movement in the event of an emergency.

⑨ Multipurpose Tray (Desk-top frame)

Large space in front of the instrument. Perfect for placing jigs, arranging specimens, or taking notes.

⑩ Jog Controller (option for 10 kN frame)

Allows hand-held control of the crosshead position. The jog dial makes fine positioning a breeze, particularly when setting the start position for bending and compression tests.

Precision Universal Tester
Quest for Convenience

Cutting-Edge Software Meets Your Materials Development and Quality Control Needs

Quickly Obtained Data

1. **Test Method & Situation Panel**
   Confirm testing conditions and the situation from the main window.

2. **Advanced Navigation System with a Learning Function**
   The Navigation Bar shows only the functions required for selected situations. In addition, the “Learning Function” records user actions for each situation and adds frequently-used functions as navigation buttons. This improves work efficiency by matching functions to a user’s operational style.

3. **Multiple Graph Function**
   Enables displaying up to four graphs. The graph can set two axes, respectively. In addition, a maximum of 50 graphs can be overlaid and point picking allows acquiring the value of a random point. This provides for a more detailed examination.

4. **Real-time Data Display Panel**
   Displays the test force, stroke (strain), extensometer or strain gauge value and other input values, enabling one-window monitoring. In addition, the random calculation value can be display simultaneously for smooth confirmation of data.

5. **Quick Panel**
   Quickly enter the speed, dimension, and report information from the main window.

6. **Result Panel**
   In addition to re-testing and extra lot tests, this panel allows changing a variety of settings before and after testing. Specimens can be inserted in any position or added to only a specific batch, and the specimen order can be changed after completing the test.

7. **Checkbox to Select Display Curve**
Intuitive Machine Operation

Visual wizard guidance ensures trouble-free entry of method settings
- Enter complicated method settings using the Method Wizard, which provides an overview of the entire process.
- Setting entry guidance, linked to online help, is available in each window.
- Easy-to-understand illustrations are used in the [Tension], [Specimen], and [Data Processing] windows, greatly simplifying the entry of settings.

Perform high-efficiency, continuous testing utilizing fast data searches and one-touch method selection
- Displays illustrations for each specimen shape. A single glance shows which dimensions should be entered.
- In addition to manual input, dimensions can be set via [Excel batch reading] or [Automatic input via calipers].
- Enter additional, non-dimensional information for each specimen.
- Prepare data processing items in advance. Simply press buttons on the figure to select settings.
- Illustrations change according to the test mode and specimen material.
- Create random calculation formula using a data processing item or specimen size.
- All functions are accessible from a top screen.
- Start testing in just one step after frequently-used methods are recorded in the Quick Method List.
- Use a keyword or date to quickly search for saved test results and Method files. Also, easily call up files using previews of reports and lists of settings.
- An example of selected plastic (Besides this, rubber and metal are available.)
Generate Detailed Reports

Richly expressive report creation includes free positioning of report elements

Report Designer allows flexible layouts. Create reports that include data, charts, photographs, and logs. Freely change the layout and element size, and use detailed settings for each element’s font, color, and ruled line.

Reports can be output in PDF, Microsoft Word, Excel, HTML formats.

After exporting, use your everyday software to customize the report.

Conventional Process Control Function

Utilize daily test records to create an XBar-R control chart using data that has been extracted for a certain period.

Daily test result statistics are available in various units, including date, specimen, batch, etc. The statistical result is displayed on the screen.

It is possible to print them by adding the text and to output it as a PDF file.

Choose from Four Software Components to Fit Your Specific Application

When multiple software components are purchased, easily switch between modes at a single touch, without starting up separate software.

**Single Software**

Performs general single-direction testing.

Examples include tensile, compression, bending and peeling tests.

**Cycle Software**

Similar to endurance testing, this software is used for testing where force is repeatedly applied and then released.

**Control Software**

Create any testing machine operation pattern. Perform foam rubber compression and holding cycle tests.

**Texture Software**

Measures the features (texture) of foods and pharmaceuticals. Produce special data processing results, including mastication, jelly strength and adhesion.
Simple Software Improves Productivity

Improves Productivity and Efficiency of Quality Control

Performs general single-direction testing. Examples include tensile, compression, bending and peeling tests.

Simple Screen Layout

Few buttons ensure easily navigated operations

One-touch test method selection

Supports Industry Standards

Recording convenient test method files enables instant testing

Includes test method files for rubbers, plastics, and films that comply with JIS/ISO/ASTM standards. The terminology and data processing items specified in the test standard are pre-registered in the respective test method file to permit smooth testing in compliance with the standards.

"Quick Method List" Makes Testing Easy

No mouse or keyboard required

Register often-used test methods to the Quick Method List to start testing instantly. The registered test methods can be directly selected or edited at the AGS-X tester, making testing easy even for users who find using a PC troublesome.

Macros Enhance Work Efficiency

Just set up the test and start testing.

All tedious operations have been automated.

The sequence of operations frequently conducted after testing can be fully automated. Functions for coordinating with the AGS-X permit saving of test data and report generation and printing without touching a PC.

Statistical Process Control Functions

Effectively utilize daily test results.

Extract and compile test results over a fixed period to create histograms and XBar-R control charts. Compile statistics on daily test results by date, specimen, or batch, and display the results on screen. Add text to statistical information for printing or output to a PDF file.

Examples of Macros
Accessories

Experience the range of possibilities available with this full-featured system

**GRIPS**

Used to grip the sample, a wide variety is available to accommodate different specimen types and test force amounts.

### Non-Shift Wedge Type Grips <MWG>

</table>

*1 Corresponds to bending strength. Compatible with support spacing from 20 mm to 200 mm.
*2 Corresponds to bending strength.
*3 Requires an adapter when the SE or SES extensometer is used.

Deflection Measuring Device for Three-point Bending Test

Applicable to the ISO 178 three-point bending test, it is possible to use this device with plastic three-point bending jigs.
Precise Measurement of Displacement

**Class 0.5**

**Automatic Extensometer SIE Series**

Automatic gauge position detection, gauge length setting, and arm clamping and unclamping of specimen.

**Class 0.5**

**Strain Gauge One-touch Extensometer SSG-H Series**

Lightweight, compact extensometer that can be attached or removed by a simple, one-touch operation.

* Requires external amplifier (option).

**Class 1**

**Differential Transformer Type Extensometers DT Series**

Applicable to the elongation measurement of metal.

Maximum diameter, thickness 45 mm Compliant with Strain Rate Control Test Methods ISO 6892

**Class 0.5**

**DSES-1000 Extensometer for Soft Specimens**

Easily and accurately measures large elongation amounts. 1000 mm Maximum Movement Distance, ±0.2% Relative Elongation Measurement Precision.

**Compression Plate Displacement Measurement Device**

Measures displacement of compression plates during compression tests.

**Strain Gauge Type Width Sensor**

Measures changes in specimen width.

---

**TRViewX Non-Contact Digital Video Extensometer**

Conducts accurate gauge length elongation measurements on specimens, based on CCD camera images, over an extensive range.

<table>

</tbody>
</table>

*1 Elongation accuracy at normal temperatures is ISO Class 0.5 compliant.

*2 With the double camera model, camera 1 takes measurements with a field of view up to 120 mm, beyond which the system switches to camera 2. Select models 500D/800D if you require a wide field of view (500 mm/800 mm) and Class 0.5 compliance up to a 120 mm field of view.
Testing in Controlled Environments

AGS-10kNXD + Screw Type Flat Grips + Compact Thermostatic Chamber TCE series

-70 °C to +280 °C

Compact Thermostatic Chamber TCE Series

Enables testing across a temperature range of −70 °C to +280 °C. +150 mm and +250 mm extension models are also available.

Temperature Range

Class 1

+300 °C +900 °C +1100 °C

High-Temperature Tensile Test Device

This test device is for tensile, bending and compression testing of steel, heat-resistant materials and ceramics under high temperature conditions.

* High temperature device can be used with floor type model (100 kN/300 kN).

Temperature Range

Refrigerator Type Environmental Temperature and Humidity Chamber

Optimal chamber for testing materials with mechanical properties sensitive to temperature and humidity effects, such as fibers, paper, or films.

Temperature regulation: Automatic control by heater and refrigerator.

Temperature Range

Humidity Range

40% to 95%

Liquid nitrogen or carbon dioxide is injected to lower the temperature. Offers colder testing environments than the refrigerator type.

Heating: Heater; Cooling: Liquid nitrogen or CO₂ injection

Temperature Range

Gas Jet Type Thermostatic Chamber TCL, TCH Series

40% to 95%

High-Precision Digital Extensometer for High-Temperature Tensile Test Device

This device complies with ISO Class 1 and ASTM B2 Class and is also applicable to the strain control for tensile testing of metals.

Temperature Range

900 °C / 1100 °C

High-Temperature Tensile Test Device

This test device is for tensile, bending and compression testing of steel, heat-resistant materials and ceramics under high temperature conditions.

* High temperature device can be used with floor type model (100 kN/300 kN).
Jigs for Specific Testing and Specimen Shapes

Pneumatic Capstan Grips for Yarn
These grips grip a yarn or cord specimen from the capstan (winch). The pneumatic operation allows application of an initial test force.

Adhesive Tape Peeling Test Device
The sample table slides in synchronization with the upper grip movement to maintain a 90° peeling angle. Peeling test jig compliant with JIS Z0237 and JIS Z1528.

Friction Modulus Test Device
For measurements of the coefficient of sliding friction between identical plastics or films or between different materials across the continuous range from static friction to dynamic friction. Two versions: compliant with JIS K7312 / ASTM 1894 and compliant with JIS K7125 / ISO 8295.

1 kN Roller Grips
The O-ring is hooked onto rollers, which rotate during tensile testing. Conforms to JIS K6251, JIS K7312, ISO 37, and ASTM D412 test standards.

Jigs for CFRP Testing Standards

Open-Hole Compression Strength Testing on Polymer Matrix Composite Laminate
ASTM D6484 is a typical method used to determine the compressive strength of CFRP open-hole samples.

Testing the Compressive Residual Strength Characteristics of a Damaged Polymer Matrix Composite Plate
The testing is performed on rectangular samples made of composite materials that have already been subjected to impact testing. The sample is mounted on the jig and subjected to compression loads.

In-Plane Shear Testing Double-V-Notched Sample Shearing
The in-plane shear strength, in-plane shear fracture strain, and in-plane shear elastic modulus of carbon-fiber-reinforced plastics can be determined by the Iosipescu test, which is an in-plane shear test on double-V-notched samples.

V-Notched Rail Shear Testing and Evaluation of Composites
This testing applies shear forces to mounted samples with 90-degree V-notches at the top and bottom.

Reinforced Yoke Options
Permits tensile testing in the download direction. (Only for 10 kN model)

Extended Column Options
For testing with a longer test stroke.

■ Options for AGS-10kNX Frame

Jog Controller
The jog dial allows manual positioning of the crosshead.

Power Cable
EU specification (VDE standard)
Chinese specification (GB standard)
Japanese, N. American specification (UL, CSA, PSE standards)
supplied as standard.

■ Options for AGS-X Series

Control I/O Box
Expands the number of control I/O ports to four. Multiple options can be simultaneously connected to the control I/O ports.

Sensor I/O Box
Expands the number of sensor I/O ports to two. Multiple options can be simultaneously connected to the sensor I/O ports. BNC cables can be connected to the analog I/O ports (2 ports each).

Other options are also available. For details, refer to the separate catalog (Shimadzu Autograph Optional Accessories).

### Calibration

- Automatic test force calibration: select tensile, compression, or tensile and compression

### Crosshead Speed and Permitted Test Force

- **Crosshead Speed Range**
  - 0.001 to 1000 mm/min (stepless)
  - 0.001 to 1600 mm/min (stepless)

- **Max. Return Speed**
  - 1500 mm/min
  - 2200 mm/min

### Crosshead Speed Accuracy *2

- ±0.1%

### Crosshead – Table Distance (Tensile stroke) *3

- **Effective Test Width**
  - 425 mm

- **Crosshead Position Detection**
  - Measurement Method: Optical encoder
  - Display Method: Digital display (display resolution: 0.001 mm)
  - Positional Accuracy: ±0.1% indicated value or ±0.01 mm, whichever is larger

### Data Capture Rate

- 1000 Hz max. *4

### Test Method Files

- 40 files (PC link: 20 files, standalone controller: 20 files)

### Standard Functions

- Automatic reading of load cell characteristic values
- Test force display, stress display, stroke display, position display
- External analog output (2 channels)
- External digital input (2 channels) **
- Analog recorder (option) output
- Dataletty (option) output **
- Automatic test force / stress control (Autotuning)
- Automatic strain control (Autotuning) **
- Test force auto-zeroing
- Test force auto-calibration
- Break detection, auto-return
- Load cell overload detection
- Touch-load detection function

### Accessories

- Load cell (with CAL cable), Power cable (2.5 m), turning rod, cable clamps, instruction manual
- Load Cell (with CAL cable), Power cable (5 m), turning rod, cable clamps, instruction manual

### Dimensions

- **AGS-10kNX**
  - 653 x 600 x 1603 mm
  - Front: 600
  - 653
  - 1603

- **AGS-20kN**
  - 641 x 718 x 1633 mm
  - Front: 718
  - 641
  - 1633

### Weight

- 85 kg
- 235 kg

### Power Requirements

- Single phase 100/120/220/240 V AC (switching type) 50/60 Hz 1.2 kVA
- Single phase AC 200–230 50/60 Hz 4.0 kVA

### Operating Environment

- Temperature: 5 °C to 40 °C; Humidity: 20% to 80% (no condensation)
- Floor vibrations: frequency 10 Hz max., amplitude 5 μm max.

---

*1 Official certification after installation is recommended to comply with EN 10002-2, ISO 7500-1, ASTM E4 standards, and JIS B7721.

*2 Crosshead speed accuracy is calculated from the crosshead travel within a prescribed time at a constant speed between 0.5 mm/minute and 500 mm/minute.

*3 The tensile stroke is the effective stroke when SCG (screw-type flat grips) or MWG (non-shift wedge-type grips) are mounted.

*4 TRAPEZIUM X or TRAPEZIUM LITE X is needed for these functions. Moreover, when automatic test force/stress control (auto tuning) and the automatic strain control (auto tuning) are used, the sampling speed becomes 10 msec.

- **AGS-50kNX**
  - Load Cell Capacity: 50 kN
  - Test Force: 0.001 to 800 mm/min (stepless)
  - Digital Display: ±0.1% value or ±0.01 mm, whichever is larger
  - 400 Hz max.
  - 40 files (PC link: 20 files, standalone controller: 20 files)
  - Floor Type: 1210 mm (745 mm, MWG)
  - 425 mm
  - Digital display (display resolution: 0.001 mm)
  - ±0.1% indicated value or ±0.01 mm, whichever is larger
  - 1000 Hz max. **
  - Automatic test force / stress control (Autotuning)
  - Test force auto-zeroing
  - Test force auto-calibration
  - Break detection, auto-return
  - Load cell overload detection
  - Touch-load detection function

- **AGS-100kNX**
  - Load Cell Capacity: 100 kN
  - Test Force: 0.001 to 800 mm/min (stepless)
  - Digital Display: ±0.1% value or ±0.01 mm, whichever is larger
  - 400 Hz max.
  - 40 files (PC link: 20 files, standalone controller: 20 files)
  - Floor Type: 1255 mm (745 mm, MWG)
  - 1475 mm
  - Digital display (display resolution: 0.001 mm)
  - ±0.1% indicated value or ±0.01 mm, whichever is larger
  - 1000 Hz max. **
  - Automatic test force / stress control (Autotuning)
  - Test force auto-zeroing
  - Test force auto-calibration
  - Break detection, auto-return
  - Load cell overload detection
  - Touch-load detection function

- **AGS-300kNX**
  - Load Cell Capacity: 300 kN
  - Test Force: 0.001 to 800 mm/min (stepless)
  - Digital Display: ±0.1% value or ±0.01 mm, whichever is larger
  - 400 Hz max.
  - 40 files (PC link: 20 files, standalone controller: 20 files)
  - Floor Type: 1475 mm (635 mm, MWG)
  - 1795 mm
  - Digital display (display resolution: 0.001 mm)
  - ±0.1% indicated value or ±0.01 mm, whichever is larger
  - 1000 Hz max. **
  - Automatic test force / stress control (Autotuning)
  - Test force auto-zeroing
  - Test force auto-calibration
  - Break detection, auto-return
  - Load cell overload detection
  - Touch-load detection function

### Load Cell
- (with CAL cable), Power cable (5 m), turning rod, cable clamps, instruction manual

---

* *5 Datalety (option) and TRAPEZIUM X / TRAPEZIUM LITE X can not be used together.
* * Values stated in this catalog are based on measurements conducted according to separately defined inspection standards.
* * Windows 7/ Windows Vista/ Windows XP is a registered trademark in the United States and other countries of Microsoft Corporation.
Testing and Evaluation Machines

**Precision Universal Tester**
AG-X plus series

**Small Table-Top Tester**
EZ Test

**Universal Testing Machines**
UH-X/FX series

**Micro Hardness Tester**
HMV-G series

**Dynamic Ultra Micro Hardness Tester**
DUH-211/211S

**Electromagnetic Force Fatigue / Endurance Testing System**
Servopulser EMT series
